Abstract

Cambodia has experienced land use and land cover change (LULCC) since the country open its door for trade and agricultural development. The propose study title is Exploring Agricultural Land Use Change Drivers and Impacts: Environment and Socioeconomic Consequents in Battambang Province, Cambodia. The study consist of two main objectives such as: 1. Characterize agricultural land use patterns and drivers in the province and 2. Assess agricultural land expansion impacts on environment, socioeconomics, and food security. Based on the study objectives, the research activities are divided into the three main tasks, which are composted by subtasks that will be implemented as series.
